

Avemar: Fermented Wheat Germ Kills All Types of Cancer Cells FAST

by Christina Sarich March 22nd, 2014

One incredible, natural product kills seemingly ALL kinds of cancer, and has been subjected to numerous scientific studies to prove its efficacy.

A non-toxic, fermented wheat germ has been shown to halt aberrations in cells – that which makes 'good' cells turn into cancerous ones. Every healthy cell has the potential to either block, interfere or promote enzymatic activity, which can then turn healthy cells into tumorous cells. Fermented wheat germ made by a standardized, patented process, and named Avemar, specifically inhibits interference in enzymatic activity so that regular cellular respiration (including glucose metabolism) can occur among only healthy cells.

While chemo and radiation kill healthy cells along with cancerous ones, fermented wheat germ only targets cancerous cells. Avemar not only halts cancerous cell growth, but also boosts the immune system in general.

Fermented wheat germ has been shown to halt ovarian cancer [1], skin cancers [2], prostate cancer [3], stomach cancer [4], leukemia [5], lymphoma [6], and more. It has cytotoxic effects [7] on almost every type of cancer cell. In fact, it had an 85% effective rate at reducing cancerous tumors in one study [8].

"Avemar (MSC) is a nontoxic fermented wheat germ extract demonstrated to significantly improve the survival rate in patients suffering from various malignancies. We investigated its effects in human HL-60 promyelocytic leukemia cells. After 24, 48, and 72 h of incubation, Avemar inhibited the growth of HL-60 cells with IC50 values of 400, 190, and 160 microg/ml, respectively. Incubation with MSC caused dose-dependent induction of apoptosis in up to 85% of tumor cells. In addition, Avemar attenuated the progression from G2-M to G0-G1 phase of the cell cycle and was also found to significantly reduce the in situ activity of ribonucleotide reductase, the key enzyme of de novo DNA synthesis. We conclude that Avemar exerts a number of beneficial effects which could support conventional chemotherapy of human malignancies."

The Memorial Sloan Kettering Cancer Center [9] says that fermented wheat germ extract (WGE) is not only anticancerous, but immune-boosting, as well as helpful in treating diabetes, obesity, and improves heart health. This natural supplement can be taken before, after, and during chemo and radiation treatments to make them more effective.
